Garmin Aera 79x integration?
Posted by rjdoyle - 2011/09/24 13:02

I have had my XRX hooked into my 695 for awhile now, with OK results. This only required using a special cable designed for the purpose.

Is there a way to integrate my XRX with my newly acquired 795?

Our XRX system WILL interface with the new 795/796 models, but the interface cables won't be available for about 3 weeks. Keep watching our website for more information regarding new interface partners.

Well, it's now been a couple of months. Any updates?

We hit some road blocks, but the cables are finally available and you will be able to purchase it on our website starting tomorrow. However, we are already sold out from preorders and won't have more stock for 3-4 weeks (lead time will be posted on our website as well).

Well, I just got the cable BUT it has a glaring weakness. I see no way to connect my headset to the 795 using this cable, as it lacks the audio cable connection of the standard cable.

This is a glaring weakness unless I am missing something.

What am I missing?

None of the interface cables assembled by us have inline audio.
The majority of the time the devices we interfaced with have an audio jack or are already wired for audio. However the new Garmin 795/796 has no audio jack. Currently the only way to get both our traffic and audio from the 796 is to hardwire it in.

After the first batch of cables arrived to us mid-December (and were already sold before they arrived), we are waiting on our second batch to arrive mid-January, so get your orders in now!
