IPad WingX Pro or Foreflight
Posted by Nwhelan - 2011/05/07 08:52

Is impossible to add Bluetooth intigration to an IPad via WingX pro or Foreflight? I would love to see this happen.

We are currently working on the iPad interface, and it will hopefully be completed soon.

Can you tell us if you will be integrating with Foreflight, WingX Pro, or another software system. I have both Foreflight and WingX Pro but plan on only keeping the one that will work with your system. If you can't let the cat our of the bag I understand ;)

We're working on multiple solutions for the iPad interface, but I can't specify which ones at the time.

Flight Guide is advertising ipad integration with the XRX through their version 4.0 of their software (which is now available on the app store) and their fly-wi gps unit. http://www.flightguide.com/flight_guide_iefb.html,

Is this integration supported by zaon? I do not want to purchase their software and their gps unit if it is not.

Neil
