## antenna vertical?

Posted by Liam548 - 2010/02/18 11:27

---

I note that it is advised to mount the antenna vertically on the MRX. Can you confirm this is in relation to the unit or to the aircraft? For example what if the glareshield is not horizontal?

thanks

Liam

reply from Zaon

"In general it is to the aircraft, as in the antenna needs to be vertical in straight-level flight"

so make sure your glareshield is actually horizontal
