
How many targets does the MRX track in background?

Posted by Mike/Glasair - 2007/03/15 07:58

Subject line says it all.

We fly out of one of the top ten busiest GA airports, with two flight schools now that PanAm moved from Vero to here. Lots of traffic in the practice area plus lots of Air Carrier flying overhead.

How many targets can the MRX simultaneously track? Can it get overwhelmed if too many? Does it let you know if it gets confused? Or what would be an indication that it's overwhelmed?

I'm guessing, like DME, it simply stops working... but you'd be looking at dashes, thinking all is well.
