
Configuration in an R44 Helicopter

Posted by Lafite - 2009/06/17 10:15

Any recommendation on the best option to use for open cockpit/high/low wing?

In the configuration I am using, a metal cased GPS is within about 3 inches of the unit (the antenna for the GPS is more than the required 6"). I am seeing a number of threats which seem to jump around the screen.
